Cortical Thickness analysis using FreeSurfer

Marta M. Correia
MRC Cognition and Brain Sciences Unit

Overview of FreeSurfer output

- Fully automated: `recon-all -i file.dcm -subject subj001 -all`

T1 Weighted
Input

Intensity Bias
correction

Skull Stripping

Volumetric Labeling

White Matter
Segmentation

Gyral Labeling

Surface Atlas
Registration

Surface Extraction

Overview of FreeSurfer output

- Fully automated: recon-all -i file.nii -subject subj001 -all

\$SUBJECTS_DIR/subj001

Group analysis in FreeSurfer

- Create the design matrix: set up FSGD file
- Select the metric to be analyzed: thickness, curvature, area, volume

thickness

curvature

area

volume

Group analysis in FreeSurfer

- Create the design matrix: set up FSGD file
- Select the metric to be analyzed: thickness, curvature, area
- Use `mri_glmfit` to fit linear model

Group analysis in FreeSurfer

- Create the design matrix: set up FSGD file
- Select the metric to be analyzed: thickness, curvature, area
- Use `mri_glmfit` to fit linear model

- Run permutation analysis to correct for multiple comparisons (`mri_glmfit-sim`)

FreeSurfer vs VBM

- VBM can be performed with a number of different packages, e.g., FSL, SPM.
- Fast compared to freesurfer surface based analyses.
- VBM allows for subcortical analysis.
- Thickness estimates do not require modulation.
- False positive rates higher in VBM because of modulation (Greve and Fischl, 2017).
- VBM harder to interpret: GM density depends on thickness, surface area, gyrification, image registration, smoothing, etc.

ROI analysis in FreeSurfer

- FreeSurfer automatically computes three brain segmentations/parcellations:
 - Subcortical segmentation

ROI analysis in FreeSurfer

- FreeSurfer automatically computes three brain segmentations/parcellations:

- Subcortical segmentation

- Cortical parcellation with Desikan/Killian atlas

ROI analysis in FreeSurfer

- FreeSurfer automatically computes three brain segmentations/parcellations:

- Subcortical segmentation

- Cortical parcellation with Desikan/Killian atlas

- Cortical parcellation with Destrieux atlas

ROI analysis in FreeSurfer

- FreeSurfer automatically computes three brain segmentations/parcellations:

- Subcortical segmentation

- Cortical parcellation with Desikan/Killian atlas

- Cortical parcellation with Destrieux atlas

ROI analysis in FreeSurfer

- Freesurfer commands to combine summary statistics into a table:
 - asegstats2table
 - aparcstats2table
- Use your favorite tool to run statistical analyses (R, SPSS, matlab, python,...)

Quality control in FreeSurfer

- recon-all is fully automated but can sometimes fail
 - Hard fail: check logs for errors
 - Soft fail: check surfaces and edit manually
